
Admin rights and other roles

In order to give administrator rights to an account:

- Open PhpMyAdmin
- Set (by double clicking on the field) the column "Role" (initially set as "Player") to "Admin"

- You can now access to administration by clicking the button "Report" when connected

You can add as many role as you want, the role of a player can be seen in its Account screen (click "Account" when connected).

Via code it can be accessed via "LoginPro.Session.Role"

IMPORTANT:

If you want to add some roles, open the file "LoginPro_UserRole" and add some more
